HYDRAULIC POWER UNIT 15 HP 3000 PSI

- Variable Volume 0-15 GPM
- Pressure Compensated

\$2600 Includes electric motor 230/460 V, 60 Hz, 3 Ph, AC

Specify Stock No. VPU1515-HB

Power Unit with a HIGH "IQ"

Automatically adjusts hydraulic circuit flow to precisely meet all changing needs of your marine equipment.

Its variable-volume, pressure compensated pump is the "brain" that prevents energy overloads and energy waste in hydraulic circuit operation. Now circuits achieve 100% efficiency! Simply set Power Unit's handwheel control to required maximum GPM. The pump then starts computing the most efficient flow possible at MINIMUM GPM that delivers peak performance at maximum PSI. As power requirements of your equipment change, the hydraulic circuit oil flow is automatically varied so energy consumption is dramatically cut and costs reduced. This Power Unit increases operational efficiency of marine machinery that must cope with hard-starting loads or applications requiring "low pressure fast approach and return," or "high pressure slow speed feed". Includes electric motor, 30 gal. reservoir, suction filter, oil level gauge, pressure gauge & 3/4" NPT pressure line fittings. Compact size 20"x20"x48"H. Wt.200 lbs. fob Chicago

For half century, NASA and firms the world over have saved here!

1-YEAR GUARANTEE

Full purchase price BACK less transportation cost if unsuitable in ANYway!
